

Flexible serialization rework operations— in the palm of your hand

Leave the line with Systech Mobile Rework

Despite your best efforts in creating cases and pallets with your well-established process of proper scanning, labeling and placement, things will go wrong. Pallets may be damaged as they move within your facility. Cases may be packed incorrectly. These cases and pallets will need to be modified. Rework must happen to ensure that the physical cases and pallets that leave your facility match the data record sent to the recipient. This is critical to avoid misalignment exceptions.

Today, rework efforts are typically tied to wired scanners attached to industrial computers on the packaging line. This limits flexibility, impedes efficiency and lowers productivity.

Systech Mobile Rework eliminates these barriers by providing comprehensive execution of all serialization rework operations off the packaging line and into the warehouse—via the freedom and flexibility of an ergonomic handheld device.

Mobile Rework allows operators to easily perform all their essential rework operations—including commissioning, decommissioning, unpacking, repacking, printing labels, and QA sampling—wirelessly. The solution is easy to deploy and eliminates the need to integrate complex rework workflows into existing packaging equipment. Mobile Rework also complies with all global regulatory serialization requirements and supports lot operations as well as warehouse rework operations.

Mobile Rework Benefits

- Increased user efficiency with anywhere, anytime use
- Improved Overall Equipment Effectiveness (OEE) with flexible mobile capability
- Reduced integration costs and deployment time
- Increased data accuracy to minimize exceptions and streamline compliance

Systech Capabilities

Easily manage every rework task on the packaging line and in the warehouse

- Product commissioning/decommissioning
 - Aggregation
 - Building new parents—capacity aware to create SGTIN or SSCC at each pack level.
 - New label printing
 - QA Sampling
 - Adding/removing children
 - Status verification
-

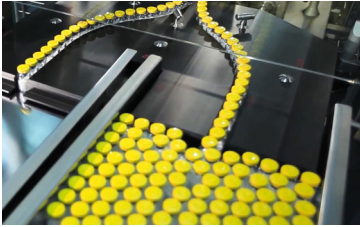

A comprehensive rework solution in the freedom and flexibility of a mobile device

Systech Mobile Rework offers significant advantages in manufacturers' and distributors' aggregation rework efforts.

Increased operator efficiency and flexibility

- Free up operators to perform rework operations quickly and efficiently—without being tethered to a large piece of hardware
- Equip multiple operators
- Manage all rework operations with an ergonomic handheld wireless device

Reduced cost and improved OEE

- Improve line productivity, without the need to support complex rework operations on the line
- Reduce integration cost with an easy-to-deploy, pre-packaged solution capable of supporting ALL rework workflows
- Leverage a fully scalable platform—connect to Level 2 or Level 3

Minimized exceptions and streamlined compliance

- Increase data accuracy by matching digital with the physical
- Simplify compliance with global regulations
- Get seamless flexibility to create partial or full-capacity aggregations with compliant labeling

Get control over your serialization rework operations. Schedule a demo of Systech Mobile Rework today.
